

Volunteers Needed for Brain Imaging Study

"Imaging the Visual Brain"

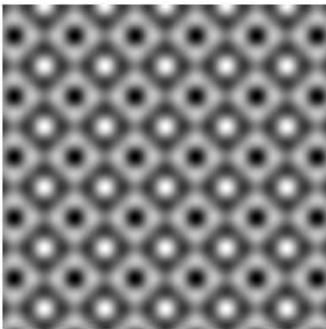

You may qualify if you have:

- Normal vision (contacts or glasses okay)
- Are 18 or older
- Have no history or family history of seizures
- Can safely have an MRI

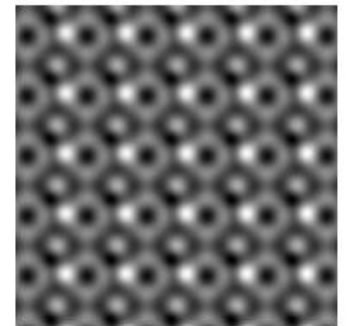

You will view visual patterns and give them numeric rating scores while your brain structure and activity is measured via MRI.

This study is being conducted for research purposes by Dr. Rick Gilmore (814-865-3664, rog1@psu.edu) at Penn State.

How does the brain help you see
when things are moving?
How does the brain decide what
objects "look good"?
How does the brain detect repeating
patterns?
